

GRAFFITI REMOVER

DESCRIPTION

GRAFFITI REMOVER is a highly effective product formulated to be both environmentally responsible and of relatively low irritancy while being very effective as a Graffiti remover.

GRAFFITI REMOVER is a unique blend of water miscible solvents and selected surface-active agents which penetrate and solubilise the coatings usually used in "tagging."

As these solvents are relatively slow in evaporation rate, as compared to acetone, methyl ethyl ketone or other more conventional solvents there is minimal loss of activity due to evaporation.

SURFACE PREPARATION

Surface to be dry.

DIRECTIONS

GRAFFITI REMOVER is applied to the surface with a brush or spray, allowed to work, approximately 5-20 minutes and flushed off with water. Repeat, as necessary, with extended contact time - be aware that the longer the contact time the greater the likelihood of solubilisation of any base coatings under the graffiti.

Please see below photographic record of its functioning in real life.

PACKS:

4L, 20L, 200L.

FIRST AID, SAFETY & STORAGE:

Refer to Material Safety Data Sheet
